

Christian Obanaka

Software engineer · Futures trader

PORTFOLIO · 2026

Designing clear products for traders.

Product design, interface systems, and frontend implementation grounded in firsthand trading and prop-firm experience.

Current role	Software Engineer · Tradara
--------------	------------------------------------

Independent build	trackmyprop
-------------------	--------------------

Specialism	Trading + fintech products
------------	-----------------------------------

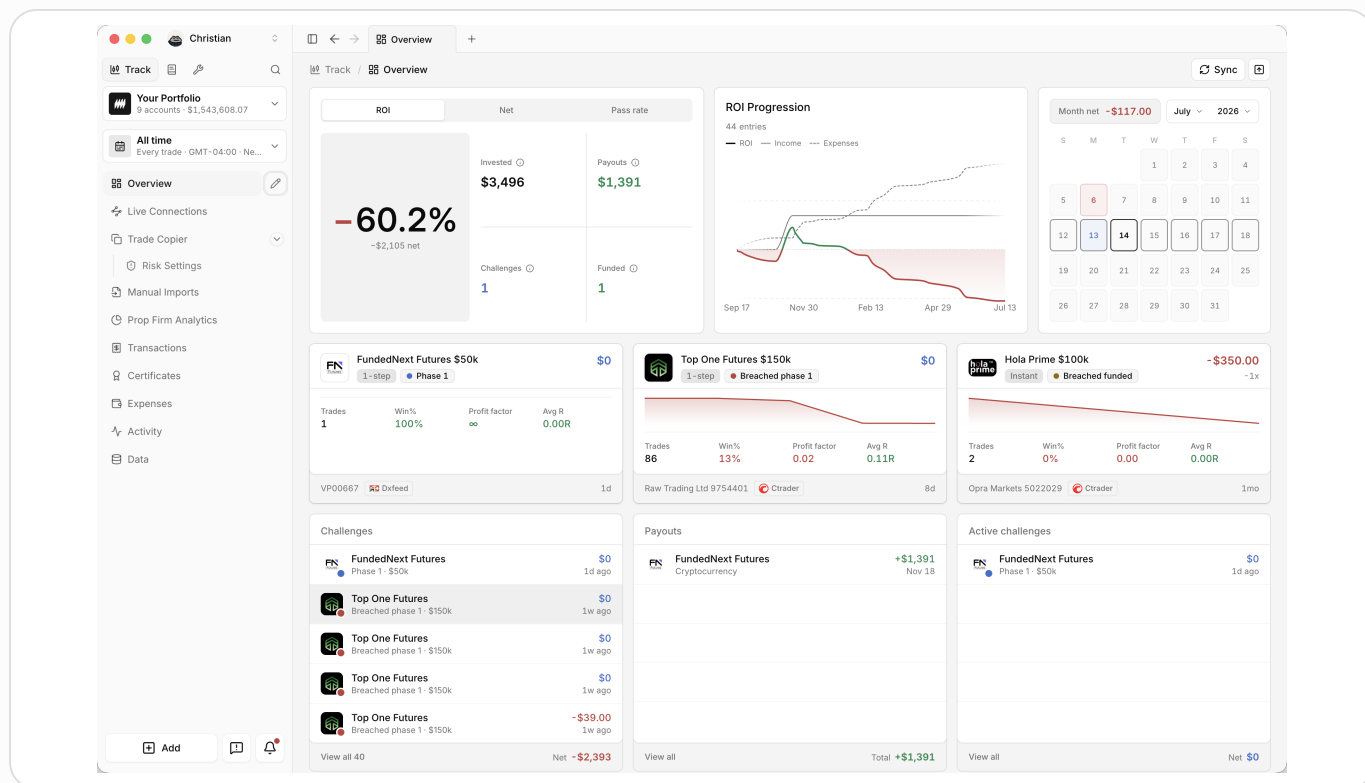

Practice	Product design + engineering
----------	-------------------------------------

CURRENTLY

Software Engineer at Tradara · Building trackmyprop

One workspace for the operational side of trading.

A desktop-first product for traders managing prop-firm accounts, rules, trades, journals, costs, and payouts.

Role

Product direction, UX/UI, implementation

Platform

Electron desktop app · macOS + Windows

Audience

Prop-firm and futures traders

State

Private beta · active development

The problem

Serious prop-firm trading work is fragmented across broker platforms, spreadsheets, notes, calculators, and support conversations. The design challenge is to make that complexity visible without making the product feel complicated.

Connected workflows, one shared language.

Track Portfolio, live connections, accounts, prop-firm journeys, transactions, expenses, and records.

Journal Trade history and review tools connecting executions to daily and longer-term context.

Tools Consistency, payout, challenge, and win-rate calculators plus an economic calendar.

System Navigation, search, reusable data surfaces, shared actions, and connection-status patterns.

The screenshot displays the 'Day review' interface, which includes a header with the title 'Day review' and a subtitle 'Day review · Auto-saves as you write.' Below the header is a toolbar with various editing tools and a 'Day review' label. The main content area shows a trade history table with columns for 'Size', 'Hold', and 'Entry → Exit'. The table lists three trades: a 'MNOU6 BUY' trade with a size of 3, a hold of 13m, and an entry/exit of 29,695.75 → 29,767.5; a 'Jun 26, 2026' trade with 11 trades, a 6W / 5L hold, and a win rate of 55%; and a 'June 2026' trade with 22 trading days, 312 trades, and a win rate of 37%. Each trade entry includes a 'Best day' and 'Worst day' summary, with the best day showing a profit of \$5,329 and the worst day showing a loss of \$1,386. The interface also features a 'Source removed' button and an 'Export' button.

Trade	Size	Hold	Entry → Exit	Best day	Worst day
MNOU6 BUY	3	13m	29,695.75 → 29,767.5	+\$5,329	-\$1,386
Jun 26, 2026	11 trades	6W / 5L	55% Win rate	+\$5,329	-\$1,386
June 2026	312 trades	22 trading days	37% Win rate	+\$5,329	-\$1,722

The journal links reflection to real trade, day, and month data instead of separating notes from performance context.

Clarity under pressure.

01

Stable desktop hierarchy

Persistent navigation, tabs, filters, and compact data surfaces support repeated daily use without turning every metric into a promotional card.

02

Rules explained as decisions

Calculators pair results with inputs, thresholds, and next required amounts so traders understand why a status changed.

03

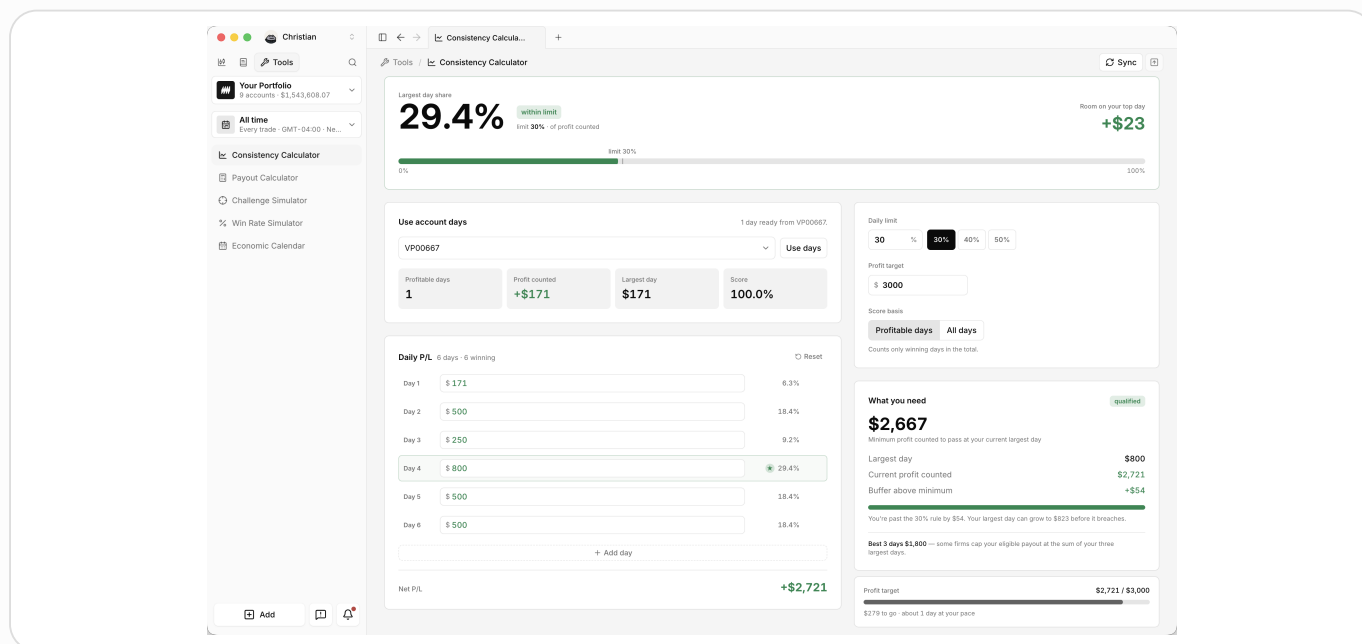

One language across workflows

Reusable account rows, status treatments, money formatting, dialogs, and page actions make unfamiliar tools predictable.

04

Safety before optimism

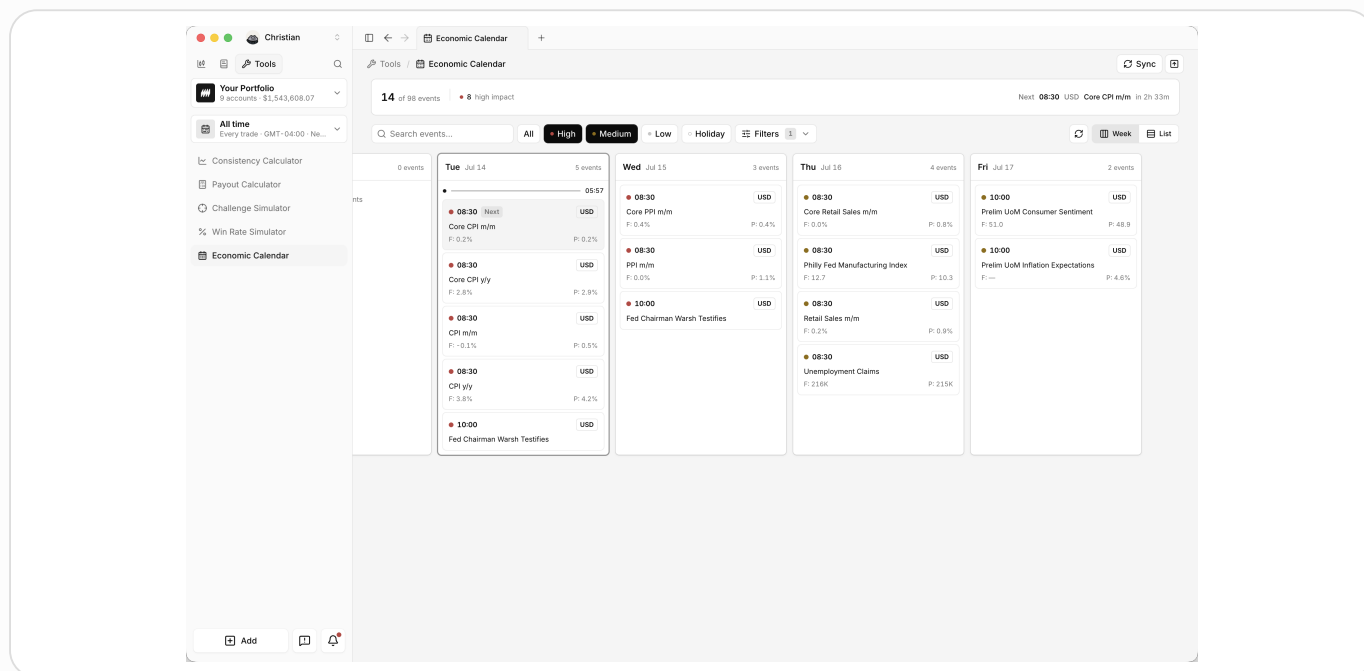

Connection and trading states use explicit status and failure language; unavailable information is never presented as a guarantee.

The consistency calculator explains the threshold, current score, and exactly what the trader needs next.

The interface is the system.

trackmyprop uses React, TypeScript, Tailwind CSS, Electron, and reusable accessible foundations. Shared tokens separate page, card, sidebar, overlay, and state layers; reusable patterns cover controls, dialogs, data rows, navigation, and status feedback.

A weekly economic calendar keeps event risk beside the trader's other operating tools.

DOMAIN EXPERIENCE

Tradara	Software Engineer	2026 - Present
thePropTrade	Head of Community	2025 - 2026
PipFarm	Community + Affiliate Manager	2025
PokerDAO	Community Manager	2022 - 2024

Let's build a trading product that feels clear.
